Web Browsers Notes

1. • To view reports on a web browser:
   - Microsoft Internet Explorer version 8 or later
   - Mozilla Firefox version 3.6 or later

   Note:
   - If both Internet Explorer and Firefox is installed on a machine, Firefox is used.
   - For better performance of reports on a Windows XP or Windows 7 32-bit machine, use the latest Firefox browser. If you are using a Windows 7 64-bit machine, use Internet Explorer 9.

2. 30.0.1599.16 is also supported for Mobile WebGUI

Hardware

Rational Test Workbench 8.6.0.3 requires the following hardware, organized by type of hardware, deployment units, or components.

Installable software

Operating System Families

Windows

Windows

Hardware	Components	Requirement	Applicable operating systems
Disk Space	**Desktop** • Rational Functional Tester • Rational Integration Tester • Rational Performance Tester • Rational Test Workbench Eclipse Client **Server** • Rational Integration Tester Platform Pack • Rational Test Control Panel **Agent or Client**	3GB of free disk space (full install)	All supported Windows operating systems

Hardware	Components	Requirement	Applicable operating systems
	• Rational Application Performance Analyzer • Rational Integration Tester Agent **Mobile Device** • Rational Test Workbench Mobile Client		
Display	**Desktop** • Rational Functional Tester • Rational Integration Tester • Rational Performance Tester • Rational Test Workbench Eclipse Client **Server** • Rational Integration Tester Platform Pack • Rational Test Control Panel **Agent or Client** • Rational Application Performance Analyzer • Rational Integration Tester Agent **Mobile Device**	Minimum 1024 x 768 resolution using 256 Colors (or higher for best results)	All supported Windows operating systems

Glossary

Bitness	Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode. **31:** The product or part of the product runs as a 31-bit application in a 31-bit operating environment. **32:** The product or part of the product runs as a 32-bit application in a 32-bit operating environment. **64-tolerate:** The product or part of the product runs as a 32-bit application in a 64-bit operating environment. **64-exploit:** The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.
Co-packaged	Additional products that are included in the product package.
Co-installed	Additional products that are included in the product package and installed when the product is installed.
Deployment unit	**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure. • The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile. • Deployment units may be further divided into deployable **components** **Desktop** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications. **Server** deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications. **Agent or client** deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent of client deployment

	units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services. **Mobile** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.
Hypervisor	A virtual machine in which a product can run on a guest operating system.
Limited operating system support	By default, the supported guest operating systems for a product and a hypervisor are the operating systems that are supported by both the product and the hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support.
Operating system minimum	The minimum operating system maintenance level that is required to run on the product.
Prerequisite minimum	The minimum maintenance level that is required for the prerequisite to work with the product.
Product minimum	The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.
Supported software minimum	The minimum maintenance level that is required for the supported software to work with the product.
Maintenance Support Release	A Maintenance Support Release is a recommended product level for which support, including defect and security updates, will be provided over a specified period of time.
