## Included in this report

This report can be generated with filters applied to operating system platforms, components, and/or software capabilities. This section reflects how the report was filtered when it was generated.

### Legend

- The information about this item is included in this report.
- The information about this item is not included in the report filter.

### Platforms

- AIX
- IBM i
- Linux
- Mac OS
- Windows
- z/OS

### Component list

#### Desktop

- RTC Eclipse Client
- RTC VS.Net Client
- RTC zLinux Client
- Web Client

#### Server

- CLM Server
- Jazz Authorization Server

### Capabilities

#### Prerequisites

- Application Servers
- Databases
- Eclipse Runtime Environment
- Identity Management
- Installation
- Java SDK
- Licensing
- Reporting and Analysis
- Runtime Environment
- Web Browsers
- Web Servers

#### Related Software

## AIX Notes

1. The RDNG Converter application will not run on AIX, IBM i, Linux for Power systems, or RHEL 7 Linux. The server-side converter.war, needed to view graphical artifacts, must be deployed on a supported platform: Windows, Linux x86 RHEL 6 or SUSE, or zLinux RHEL 6 or SUSE. If your RDNG installation is on a platform not currently supported by the converter application, this document describes the delegated converter configuration option: [Rational Requirements Composer Converter Application Installation](#).

## Linux Notes

1. SUSE Linux for System z is supported for RTC, RQM, and RDNG.
2. Supported for RTC, RQM, and RDNG.  
If you are running the Eclipse client on Linux please ensure that you have a compatible xulrunner or webkitgtk installed and configured on your system. Failure to do so can result in various issues including failure to start. See [Article](#) for additional details and instructions.  
The RDNG Converter application will not run on AIX, IBM i, Linux for Power systems, or RHEL 7 Linux. The server-side converter.war, needed to view graphical artifacts, must be deployed on a supported platform: Windows, Linux x86 RHEL 6 or SUSE, or zLinux RHEL 6 or SUSE. If your RDNG installation is on a platform not currently supported by the converter application, this document describes the delegated converter configuration option: [Rational Requirements Composer Converter Application Installation](#)

## Windows Notes

1. Although this OS is no longer in service, CLM products will continue to support it in this release. Future releases may deprecate support for this OS.
2. Does not include Metro Support  
Supported for the RTC Eclipse 4.2.2 client and higher.

## z/OS Notes

1. Jazz Authorization Server is not supported for z/OS or IBMi.

The RDNG Converter application will not run on AIX, IBM i, Linux for Power systems, or RHEL 7 Linux. The server-side converter.war, needed to view graphical artifacts, must be deployed on a supported platform: Windows, Linux x86 RHEL 6 or SUSE, or zLinux RHEL 6 or SUSE. If your RDNG installation is on a platform not currently supported by the converter application, this document describes the delegated converter configuration option: [Rational Requirements Composer Converter Application Installation](#).

Rational Team Concert promotion and deployment support for z/OS require the REXX runtime or REXX alternate libraries (REXX.\*\*.SEAGLPA, or REXX.\*\*.SEAGALT). If you do not have either the REXX Library or the REXX Alternate Library installed, you can install the REXX Alternate Library to fulfill the REXX Library requirement. The REXX Alternate Library is shipped as part of the z/OS operating system beginning with release 1.9. The Alternate Library is also available as a free download from <http://www.ibm.com/support/entry/portal/>.

## Application Servers Notes

1. If using WAS for z/OS 8.5.5 or later, the fix for APAR PI40241 is REQUIRED.  
CLM supports both traditional WAS and the Liberty profile on z/OS. WAS 8.5.5 Liberty is bundled in the SMP/e packaging.  
The WAS installation bundles the web server, so specific web server version support is not listed in this report.
2. Excludes the Liberty profile configuration option.  
WAS 8.5 was bundled with the CLM 4.0.3 to 4.0.6 media. Customers upgrading from CLM 4.0.3 to 4.0.6 are entitled to continue using WAS 8.0.x as long as CLM supports those versions.  
There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5.  
The WAS installation bundles the web server, so specific web server version support is not listed in this report.
3. CLM supports WAS ND but **not** for high availability clustering.  
There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5.  
The WAS installation bundles the web server, so specific web server version support is not listed in this report.
4. The WAS installation bundles the web server, so specific web server version support is not listed in this report.
5. There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5.  
The WAS installation bundles the web server, so specific web server version support is not listed in this report.
6. CLM supports WAS ND but **not** for high availability clustering.  
The WAS installation bundles the web server, so specific web server version support is not listed in this report.
7. Excludes the Liberty profile configuration.  
WAS 8.5.5 is bundled with CLM. WAS bundles are only available on Passport Advantage and in the CLM Media (not on Jazz.net).  
The WAS installation bundles the web server, so specific web server version support is not listed in this report.
8. Excludes the Liberty profile configuration option.  
WebSphere Application Server support for CLM is 64-bit only to align with 64-bit server platforms.  
There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5.  
The WAS installation bundles the web server, so specific web server version support is not listed in this report.

9. Tomcat 7.0.59 is required, because of a fix for TLS.  
Tomcat may be deprecated in a future release in favor of support for WebSphere Liberty.

## Databases Notes

1. JTS Setup for Microsoft SQL Server does not support Integrated Authentication. You will be unable to install CLM in your environment. Ensure that server security is in mixed mode. To validate this, check server security -- it should be set to SQL Server and Windows Authentication Mode.
2. Requires Oracle Java Database Connectivity (JDBC) ojdbc6.jar.11.2.0.3 or higher.
3. DB2 WSE 10.5.0.3 is bundled with the CLM products. Clients upgrading from 10.1 are entitled to continue using that version for as CLM supports that version.
4. Clients upgrading from a previous version of RTC or CLM are entitled to continue using that version of DB2.
5. CLM, RTC, RQM, DNG, RELM all support the PureScale feature in the Advanced editions of DB2.
6. DB2 Express Edition is supported for small teams only (of 50 developers or less).
7. Oracle not supported for z/OS or IBM i.
8. The CLM products bundle Derby. For Evaluation purposes only, or for small teams of 10 users or less. Not to be used for benchmarking performance.

## Eclipse Runtime Environment Notes

1. The RTC p2 Install Repository download from jazz.net may be used to install into Eclipse 4.3.2 and 4.4.2 and 4.5.1 downloads from eclipse.org.
2. The RTC client bundles both IBM Eclipse SDK 3.6.2.3 and IBM Eclipse SDK 4.2.2.1 (two installation options). The CLM Server bundles IBM Eclipse SDK 3.6.2.3, and uses the Eclipse Runtime, Equinox and EMF.
3. The RTC Client bundles IES 3.6.2.3 or 4.2.2.1 (two installation options).

## Runtime Environment Notes

1. VS.Net is supported for the RTC Client for Visual Studio  
RTC specifically supports the Visual Studio Enterprise and Professional Editions
2. Adobe Flash Player is utilized by the RTC Work Item Statistics dashboard viewlet. Although previous versions of Flash may work with RTC, it is HIGHLY recommended that Adobe Flash Player be upgraded to at least 18.0.0.209, because of the recently discovered security vulnerabilities in Flash.
3. VS.Net is supported for the RTC Client for Visual Studio  
RTC specifically supports the Visual Studio Professional, Premium and Ultimate Editions

## Web Browsers Notes

1. The Safari browser shows graphical artifacts in preview mode, but does not support editing. The RDNG Graphical Editor is supported on Windows only using Internet Explorer in 32-bit mode or Firefox in 32-bit mode (ONLY). This will not work in any other browser or OS.
2. Chrome does not provide an ESR release - they typically provide a new release every 6 weeks. To support this, CLM will regularly support the current release of Chrome and the two prior versions. The versions supported for any particular CLM release are based on the Chrome versions available at the time of the CLM GA.  
For RDNG the Chrome browser will show graphical artifacts in preview mode, but will not support editing. The RDNG Graphical Editor is supported on Windows only using Internet Explorer in 32-bit mode or Firefox in 32-bit mode (ONLY). This will not work in any other browser or OS.
3. The RDNG Graphical Editor is supported on Windows only using Internet Explorer in 32-bit mode or Firefox in 32-bit mode (ONLY). This will not work in any other browser or OS.  
Please see these tech note articles for [mixed http/https content](#) and [self-signed certificates](#), which may result in content not being shown as expected.

## Collaboration Notes

1. Git integrates with RTC via RLIA. See [Rational Lifecycle Integration Adapters](#) regarding specific versions supported.
2.
  - *IBM Connections integrates with RTC only.*
  - *Please note that this integration supports form based auth, but not OAuth which means that the integration is not currently supported on the IBM [SmartCloud](#)*
3. RLIA enables integrations with Jira, GIT, HP ALM and QC, and many others. See [Rational Lifecycle Integration Adapters](#) for additional details.
4. JIRA integrates with RTC, RQM, and RDNG via RLIA. See [Rational Lifecycle Integration Adapters](#) regarding specific versions supported.
5. HP ALM and QC integration provided via RLIA. See [Rational Lifecycle Integration Adapters](#) regarding specific versions supported.

# Glossary

---

**Bitness**

Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode.

**31:** The product or part of the product runs as a 31-bit application in a 31-bit operating environment.

**32:** The product or part of the product runs as a 32-bit application in a 32-bit operating environment.

**64-tolerate:** The product or part of the product runs as a 32-bit application in a 64-bit operating environment.

**64-exploit:** The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.

---

**Co-packaged**

Additional products that are included in the product package.

---

**Co-installed**

Additional products that are included in the product package and installed when the product is installed.

---

**Deployment unit**

**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure.

- The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile.
- Deployment units may be further divided into deployable **components**

**Desktop** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications.

**Server** deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications.

**Agent or client** deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent or client deployment

units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services.

**Mobile** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.

<b>Hypervisor</b>	A virtual machine in which a product can run on a guest operating system.
<b>Limited operating system support</b>	By default, the supported guest operating systems for a product and a hypervisor are the operating systems that are supported by both the product and the hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support.
<b>Operating system minimum</b>	The minimum operating system maintenance level that is required to run on the product.
<b>Prerequisite minimum</b>	The minimum maintenance level that is required for the prerequisite to work with the product.
<b>Product minimum</b>	The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.
<b>Supported software minimum</b>	The minimum maintenance level that is required for the supported software to work with the product.
<b>Maintenance Support Release</b>	A Maintenance Support Release is a recommended product level for which support, including defect and security updates, will be provided over a specified period of time.
