# Included in this report

This report can be generated with filters applied to operating system platforms, components, and/or software capabilities. This section reflects how the report was filtered when it was generated.

#### Legend

- The information about this item is included in this report.
- The information about this item is not included in the report filter.

# Platforms

#### **Deployment unit list**

- Desktop
- Linux
- Mac OS
- Windows

#### **Capabilities**

#### **Prerequisites**

- Eclipse Runtime Environment
- Installation
- Java
- Licensing

#### **Related Software**

- Application Servers
- Compilers and Languages
- Databases
- Development Tools
- Hosted Environments
- JDBC Drivers
- Miscellaneous
- Portal Servers
- Reporting and Analysis
- Requirements Management
- Transaction Servers and Gateways
- Web Browsers

# **Operating Systems**

The Operating sysytems section specifies the operating systems that Rational Software Architect 9.1.1 supports, organized by operating system familiy.

Component support

Full

Partial

None

#### Operating system families

Windows

#### **Windows**

# Summary

Operating system	Operating system minimum	Hardware	Bitness	Product minimum	Components 👤	Notes?

# Rational Software Architect 9.1.1 Detailed System Requirements

### Web Browsers Notes

- 1. Minimum browser requirement on 64-bit Rational Software Architect v8.5
- 2. Not supported on 64-bit Rational Software Architect v8.5

Rational Software Architect 9.1.1 requires the following hardware, organized by type of hardware, deployment units, or components.

### Installable software

**Operating System Families** 

Windows

### **Windows**

Hardware	Deployment units	Requirement	Applicable operating systems
Disk Space	Desktop	3.5GB minimum for installing and additional disk space for development resources     7.0 GB required when installing from a download minimum disk space can be reduced if optional features and run times are not installed	All supported Windows operating systems
Display	Desktop	1024 x 768; 1280 X 1024 recommended	All supported Windows operating systems
Memory	Desktop	<ul> <li>Minimum: 2GB RAM</li> <li>Recommended: 4GB RAM</li> <li>Large Workspace/Multiple WAS: 6GB RAM</li> </ul>	All supported Windows operating systems
Processor	Desktop	<ul> <li>Minimum: 32-bit (x86) dual core</li> <li>Recommended: 64-bit (x64) quad core or better</li> <li>Large Workspace/Multiple WAS: 64-bit (x64) processor, i5, i7 or better (or AMD equivalent)</li> </ul>	All supported Windows operating systems

# Glossary

#### **Bitness**

Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode.

**31:** The product or part of the product runs as a 31-bit application in a 31-bit operating environment.

**32:** The product or part of the product runs as a 32-bit application in a 32-bit operating environment.

**64-tolerate:** The product or part of the product runs as a 32-bit application in a 64-bit operating environment.

**64-exploit:** The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.

#### Co-packaged

Additional products that are included in the product package.

#### Co-installed

Additional products that are included in the product package and installed when the product is installed.

#### **Deployment unit**

**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure.

- The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile.
- Deployment units may be further divided into deployable components

**Desktop** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications.

**Server** deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications.

**Agent or client** deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent of client deployment

units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services.

**Mobile** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.

#### A virtual machine in which a product can run on a guest operating system. **Hypervisor** By default, the supported quest operating systems for a product and a hypervisor Limited operating are the operating systems that are supported by both the product and the system support hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support. The minimum operating system maintenance level that is required to run on the Operating system product. minimum The minimum maintenance level that is required for the prerequisite to work with **Prerequisite** the product. minimum Product minimum The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software. Supported software The minimum maintenance level that is required for the supported software to work with the product. minimum A Maintenance Support Release is a recommended product level for which **Maintenance Support** support, including defect and security updates, will be provided over a specified Release period of time.
